Dear American Family, I am really happy that you have made decision to host foreign students. I hope the exchange year will bring lots of fun and new experience to you. In my family we enjoy doing something together, and I often help my dad to make or fix something. Besides I enjoy traveling together. At home I always help my mother, because I enjoy it. I am interested in computers and programming, some kinds of sport like table tennis, cycling, mountain biking. I also enjoy learning something new and traveling. Besides I like backpacking, training, and I enjoy getting new experience from new hobbies, activities in which I haven't participated yet.

I love to go cycling with my friends, because it is a lot of fun and we can learn more about our big city. I also very enjoy going out with them and talking about everything: our hobbies, new things we learned. It is very interesting for me to know what my friends think about something, and we often discuss some things like how popular inventions work, or why do we need to study. We often talk about different ways to work or receive and remember information.

My city is very big, but there are no skyscrapers here. If was created in 1775, and then, became very popular because of its minerals. There are lots of iron underground, so our city has lots of factories that work with this iron. I like this city mostly because it has no skyscrapers.

In my future I want to start opening some kind of street food shops in big cities and have money to invest in other starting businesses or startups. To have money for all those ideas, I want to work as programmer somewhere. This is the reason why I learn programming but I also very like it. After school I really want to study in USA but if something will go wrong I have some ideas on where to study in Ukraine or Europe. I
want to study in USA because I really love how the universities work there and I know that there I could find more good universities and companies than in my country. I also very like the culture of the USA.

I want you to know that I will enjoy everything we will do together. It would be very cool if you will teach me or tell me something new. I think it is very important to exchange information with other people. Also, I very like to help people do something and if we will make something together, it would be very great. What about religion, I don’t have any but it would be okay for me if we will go to the church.

I really like the idea of being student in USA for one year. I like that this experience will give me new friends, new knowledge and new ideas. Also, it will make me stronger and confident, and in the next times I will deal with another culture it will be a lot easier for me. Besides that, it is very interesting for me to try myself in something new and it is a really good chance. It also will be very interesting to live in your family because I want to know more about your culture and get this cool experience. Thank you!
